Product Description

Supplemental Facts

En Español

Dr. Venessa's Anti-Aging 3 Collagen powder is a scientifically developed, professional formula based upon the research of the late Linus Pauling. Collagen is found in every cell, tissue, muscle, bone and in every organ of our body. Collagen, the glue of our bodies and the answer to aging well, is reduced by 1.5% every year that we age. Most people have already lost 15% of their collagen by the time they reach 40 years of age and this cycle continues throughout our lifetime.

Due to the unique nature of Dr. Venessa's Anti-aging 3 Collagen, the product contains types I,II & III, targeted amino acids, vitamin C and trace elements, that may actually encourage our bodies to manufacture its own collagen. Cellular renewal and repair is the key ingredient to staying younger longer and leading healthier productive lives. Dr. Venessa's Anti-Aging3 Collagen is not just about reducing facial lines and wrinkles but restoring healthy aging from the inside out.
